

### 3: Upper Terrace

A sheltered and intimate social space and setting for cultural venue/cafe/creative space spill-out. Designed to invite people in to sit and relax - such as movable tables and chairs allowing visitors to create their own social setting - amongst a soft and welcoming landscape incorporating generous planting schemes for biodiversity and well-being. Public seating incorporated within generous planting schemes designed for biodiversity and well-being with planting beds designed to create a soft and intimate setting for spill-out.

### 4: Civic Square

A new civic square can serve as a reception area and meeting point for the town, designed to invite people in to sit, relax and socialise. A flexible gathering space suitable for all kinds of community focused events as well as activities that increase the 'dwell time' of visitors to the town centre. A place where people can safely meet in the evening. A place of performance (formal and informal), a place for people-watching and in turn a place to be seen. A place for continual change, activated with events.

### 2: Green Roof

The green roof on the link building provides continuity of the landscaping through the building itself and reflects the route of the original Battery Green park - providing bio diversity enhancements to a site that currently offers very little in terms of sustainability and ecological value.

Increasing ecological habitat, building thermal insulation and reducing surface water run off rates and running costs - the green roof is a sustainable and environmentally friendly way of softening the impact of the development on nature and the town centre

### 1: Green Route

Bringing nature back into the town centre, densely planted areas display an assortment of smells and colours to stimulate the senses and promote biodiversity. Landscape features that provide opportunity to stop, rest and socialise. Incidental play features create a new point of attraction for young people and families.
